**COURSE OUTCOMES**

At the end of the course, the students will be able to,

1. Apply the concept of correlation, fit suitable curve to the given data and analyse the result.
2. Apply the concepts of probability, random variable, moments, moment generating function and their properties to solve the problems.
3. Analyse the characteristics of the estimators, find the estimate of the parameters using maximum likelihood estimation and method of moments.
4. Test the hypothesis about the population using  $Z$ ,  $t$ ,  $F$  and  $\chi^2$ -test statistics.
5. Apply the multivariate analysis concept to analyse the given set of data which involves more than one variable

**.UNIT – I CORRELATION, CURVE FITTING AND REGRESSION 12**

Simple and rank correlations – Multiple and partial correlations – Curve fitting – Principle of least squares – Fitting a straight line – Fitting a parabola – Fitting an exponential curve – Fitting a curve of the form  $y = ax^b$  – Linear regression – Multiple and partial regressions.

**UNIT – II PROBABILITY AND RANDOM VARIABLE 12**

Axioms of probability – Conditional probability – Total probability – Baye's theorem – Random variable – Probability mass function, probability density function, moments, moment generating function and their properties.

**UNIT – III ESTIMATION THEORY 12**

Estimators – Unbiasedness, consistency, efficiency and sufficiency (definitions and simple problems only) – Maximum likelihood estimation – Method of moments.

**UNIT – IV TESTING OF SIGNIFICANCE 12**

Parameter and statistic – Null and alternative hypothesis – Errors in sampling, critical region and level of significance – One tailed and two tailed tests – Large sample tests for proportions, mean, difference between means, standard deviation –  $t$ -test for single mean, difference between means – Paired  $t$ -test –  $\chi^2$ -test for independence of attributes, goodness of fit –  $F$ -test.

**UNIT – V MULTIVARIATE ANALYSIS 12**

Random vectors and matrices – Mean vectors and covariance matrices – Multivariate normal density and its properties – Principal components: population components from standardized variables.

**TOTAL: 60 Hours**

## **TEXT BOOK**

1. S. C. Gupta, V. K. Kapoor, “Fundamentals of Mathematical Statistics”, Sultan Chand and Sons Publishers, 11<sup>th</sup> Edition (Reprint), 2019.
2. R. A. Johnson and D. W. Wichern, “Applied Multivariate Statistical Analysis”, Pearson Publishers, 6<sup>th</sup> Edition, 2015.

## **REFERENCE BOOKS**

1. J. L. Devore, “Probability and Statistics for Engineering and the Sciences”, Thomson and Duxbury Publishers, 9<sup>th</sup> Edition, 2015.
2. R. A. Johnson and C. B. Gupta, “Miller and Freund’s, Probability and Statistics for Engineers”, Pearson Publishers, 9<sup>th</sup> Edition, 2018.

**COURSE OUTCOMES**

At the end of the course, the student will be able to

1. Explain the need and challenges of Big data and analytics
2. Apply and write jobs in Hadoop and map reduce framework and configure Hadoop eco systems and work with tools that are handling big data.
3. Create NoSQL database and apply CRUD operations in MongoDB
4. Create database and apply CRUD operations in Cassandra and Hive
5. Write PigLatin scripts for database maintenance and Perform statistical based analysis and describe the data using various graphical methods

**UNIT I INTRODUCTION****9**

Types of Digital Data – Introduction to Big Data - Big Data Analytics - classification of Analytics - Greatest Challenges that Prevent Businesses from Capitalizing on Big Data - Top Challenges Facing Big Data - Why is Big Data Analytics Important? - Data Science - Terminologies Used in Big Data Environment - Few Top Analytics Tools.

**UNIT II TECHNOLOGIES, HADOOP AND MAP REDUCE****9**

The big data technology landscape – NoSQL – Hadoop - Introduction to Hadoop - RDBMS versus Hadoop - RDBMS versus Hadoop - Hadoop Overview - Hadoop Distributed File System - Processing Data with Hadoop - Managing Resources and Application with Hadoop YARN - Hadoop Ecosystem – Introduction to Map reduce Programming

**UNIT III MONGODB****9**

Introduction to MongoDB - What is MongoDB? - Why MongoDB? - RDBMS and MongoDB - Data Types in MongoDB – MongoDB Query Language

**UNIT IV CASSANDRA AND HIVE****9**

Introduction to Cassandra - Features of Cassandra - CQL Data Types – CQLSH – Keyspaces - CRUD – Collections – Alter - Import and Export – querying system tables

Hive Architecture - Hive Data Types - Hive File Format - Hive Query Language- RCFile Implementation – SerDe – User Defined Functions

**UNIT V PIG AND RECENT TRENDS****9**

Introduction to Pig - The Anatomy of Pig - Pig on Hadoop - Pig Latin Overview - Data Types - Running Pig - Execution Modes of Pig - HDFS Commands - Relational operators - Eval Function - Complex Data Type - User Defined Function - parameter Substitution - Diagnostic Operator - Word Count Example - When to use Pig? - When NOT to use Pig? - Pig versus Hive - Reporting tool – Trends – Case study

**COURSE OUTCOMES**

At the end of the course, the student will be able to

1. Design data structures and algorithms to solve computing problems.
2. Implement and analysis of hierarchical data structures and algorithms.
3. Design algorithms using graph structure and various string matching algorithms to solve real-life problems.
4. Apply suitable design strategy for problem solving.
5. Implement approximation algorithms.

**UNIT I    ROLE OF ALGORITHMS IN COMPUTING      9**

Algorithms – Algorithms as a Technology- Insertion Sort – Analyzing Algorithms – Designing Algorithms- Growth of Functions: Asymptotic Notation – Standard Notations –Divide and Conquer- Maximum-subarray problem- Strassen’s algorithm- Common Functions- Recurrences: The Substitution Method – The Recursion-Tree Method-The Master method

**UNIT II    HIERARCHICAL DATA STRUCTURES      9**

Binary Search Trees: Basics – Querying a Binary search tree – Insertion and Deletion- Red-Black trees: Properties of Red-Black Trees – Rotations – Insertion – Deletion- B-Trees: Definition of B trees – Basic operations on B-Trees – Deleting a key from a B-Tree- Fibonacci Heaps: Structure – Heap operations – Decreasing a key and deleting a node – Bounding the maximum degree

**UNIT III    GRAPHS      9**

Elementary Graph Algorithms: Representations of Graphs – Breadth-First Search – Depth-First Search – Topological Sort – Strongly Connected Components- Minimum Spanning Trees: Growing a Minimum Spanning Tree – Kruskal and Prim- Single-Source Shortest Paths: The Bellman-Ford algorithm – Single-Source Shortest paths in Directed Acyclic Graphs – Dijkstra’s Algorithm; All Pairs Shortest Paths: Shortest Paths and Matrix Multiplication – The Floyd-Warshall Algorithm

**UNIT IV    ALGORITHM DESIGN TECHNIQUES      9**

Dynamic Programming: Matrix-Chain Multiplication – Elements of Dynamic Programming –Longest Common Subsequence- Greedy Algorithms: An Activity-Selection Problem – Elements of the Greedy Strategy – Huffman Codes

**UNIT V    NP COMPLETENESS AND APPROXIMATION ALGORITHMS      9**

NP-Completeness: Polynomial Time – Polynomial-Time Verification – NP-Completeness and Reducibility – NP-Completeness Proofs – NP-Complete Problems- Approximation Algorithms: Vertex-Cover problem- Travelling-Salesman problem – Subset-sum problem

**THEORY: 45                      TUTORIAL: -                      PRACTICAL:                      TOTAL: 45 Hours**

**TEXT BOOK**

1. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, “Introduction to Algorithms”, Third Edition, Prentice-Hall.

## REFERENCES

2. Alfred V. Aho, John E. Hopcroft, Jeffrey D. Ullman, "Data Structures and Algorithms", Pearson Education.
3. Donald E Knuth, "Art of Computer Programming-Volume I- Fundamental Algorithms", Third edition, Addison Wesley.

**COURSE OUTCOMES**

At the end of the course, the student will be able to

6. Review the literature of the research problem
7. Choose appropriate data collection and sampling method according to the research problem.
8. Interpret the results of research and communicate effectively with their peers
9. Explain the Importance of intellectual property rights
10. Evaluate trade mark, develop and register patents

**UNIT I INTRODUCTION TO RESEARCH METHODS 6**

Definition and Objective of Research, Various steps in Scientific Research, Types of Research, Criteria for Good Research, Defining Research Problem, Research Design , Case Study Collection of Primary and Secondary Data, Collection Methods: Observation, Interview, Questionnaires, Schedules,

**UNIT II SAMPLING DESIGN AND HYPOTHESIS TESTING 6**

steps in Sampling Design, Types of Sample Designs, Measurements and Scaling Techniques - Testing of hypotheses concerning means (one mean and difference between two means -one tailed and two tailed tests), concerning variance – one tailed Chi-square test.

**UNIT III INTERPRETATION AND REPORT WRITING 6**

Techniques of Interpretation, Precaution in Interpretation, Layout of Research Report, Types of Reports, Oral Presentation, Mechanics of Writing Research Report

**UNIT IV INTRODUCTION TO INTELLECTUAL PROPERTY 6**

Introduction, types of intellectual property, international organizations, agencies and treaties, importance of intellectual property rights, Innovations and Inventions trade related intellectual property rights.

**UNIT V TRADE MARKS, COPY RIGHTS AND PATENTS 6**

Purpose and function of trade marks, acquisition of trade mark rights, trade mark registration processes, trademark claims –trademark Litigations- International trademark law

Fundamental of copy right law, originality of material, rights of reproduction, rights to perform the work publicly, copy right ownership issues, copy right registration, notice of copy right, international copy right law.

Law of patents: Foundation of patent law, patent searching process, ownership rights and transfer

**THEORY: 30 Hours TUTORIAL: - PRACTICAL: - TOTAL: 30 Hours**

**TEXT BOOKS**

12. M.Ashok Kumar and Mohd.Iqbal Ali :”Intellectual Property Rights” Serials Pub

## COURSE OUTCOMES

At the end of the course, the student will be able to

1. Create applications for Big Data analytics
2. Apply data modelling techniques to large data sets
3. Prepare for data summarization, query, and analysis.

## LIST OF EXPERIMENTS

1. (i) Perform setting up and Installing Hadoop in its two operating modes:
  - Pseudo distributed,
  - Fully distributed.(ii) Use web based tools to monitor your Hadoop setup.
2. (i) Implement the following file management tasks in Hadoop:
  - Adding files and directories • Retrieving files • Deleting filesii) Benchmark and stress test an Apache Hadoop cluster
3. Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm.
  - Find the number of occurrence of each word appearing in the input file(s)
  - Performing a MapReduce Job for word search count (look for specific keywords in a file)
4. Stop word elimination problem:
  - Input:           A large textual file containing one sentence per line  
                      A small file containing a set of stop words (One stop word per line)
  - Output:  
                      A textual file containing the same sentences of the large input file without the words appearing in the small file.
5. Write a Map Reduce program that mines weather data.  
Data available at: <https://github.com/tomwhite/hadoopbook/tree/master/input/ncdc/all>.
  - Find average, max and min temperature for each year in NCDC data set?
  - Filter the readings of a set based on value of the measurement, Output the line of input files associated with a temperature value greater than 30.0 and store it in a separate file.
6. Purchases.txt Dataset
  - a. Instead of breaking the sales down by store, give us a sales breakdown by product category across all of our stores

- b. What is the value of total sales for the following categories? ♣ Toys ♣ Consumer Electronics
  - c. Find the monetary value for the highest individual sale for each separate store
  - d. What are the values for the following stores? ♣ Reno ♣ Toledo ♣ Chandler
  - e. Find the total sales value across all the stores, and the total number of sales.
7. Install and Run MongoDB then use MongoDB to create, alter, and drop databases, tables, views, functions, and indexes
  8. Install and Run Pig then write Pig Latin scripts to sort, group, join, project, and filter your data.
  9. Write a Pig Latin scripts for finding TF-IDF value for book dataset (A corpus of eBooks available at: Project Gutenberg)
  10. Install and Run Hive then use Hive to create, alter, and drop databases, tables, views, functions, and indexes

**TOTAL: 60 HOURS**

**COURSE OUTCOMES**

At the end of the course, the student will be able to

1. Implement the tree data structure
2. Implement graph algorithms
3. Implement problems in greedy and approximation approach

**LIST OF EXPERIMENTS**

1. Implementation of Binary Search Tree
2. Implementation of Fibonacci Heaps
3. Implementation of Red-Black tree
4. Implementation of Spanning Tree
5. Implementation of Shortest Path Algorithms
6. Implementation of Graph Traversals
7. Implementation of Greedy Algorithms
8. Implementation of Approximation Algorithms

**TOTAL: 60 Hours**

**COURSE OUTCOMES**

At the end of the course, the student will be able to,

1. Explain the genesis of Agile and driving forces for choosing Agile techniques.
2. Comprehend the Agile Scrum framework and development practices.
3. Assess the software product using Agile testing methodologies and perform testing activities within an agile project.
4. Apply software design principles and refactoring techniques to achieve agility.
5. Evaluate the agile approach impact on cutting-edge technologies and also realize the business value for adopting agile software development.

**UNIT I FUNDAMENTALS OF AGILE 9**

The Genesis of Agile, Introduction and background, Agile Manifesto and Principles, Overview of Scrum, Extreme Programming, Feature Driven development, Lean Software Development, Agile project management, Design and development practices in Agile projects, Test Driven Development, Continuous Integration, Refactoring, Pair Programming, Simple Design, User Stories, Agile Testing, Agile Tools

**UNIT II AGILE SCRUM FRAMEWORK 9**

Introduction to Scrum, Project phases, Agile Estimation, Planning game, Product backlog, Sprint backlog, Iteration planning, User story definition, Characteristics and content of user stories, Acceptance tests and Verifying stories, Project velocity, Burn down chart, Sprint planning and retrospective, Daily scrum, Scrum roles – Product Owner, Scrum Master, Scrum Team, Scrum case study, Tools for Agile project management

**UNIT III AGILE TESTING 8**

The Agile lifecycle and its impact on testing, Test-Driven Development (TDD), Testing user stories - acceptance tests and scenarios, Planning and managing testing cycle, Exploratory testing, Risk based testing, Regression tests, Test Automation, Tools to support the Agile tester

**UNIT IV AGILE SOFTWARE DESIGN AND DEVELOPMENT 10**

Agile design practices, Role of design Principles including Single Responsibility Principle, Open Closed Principle, Liskov Substitution Principle, Interface Segregation Principles, Dependency Inversion Principle in Agile Design, Need and significance of Refactoring, Refactoring Techniques, Continuous Integration, Automated build tools, Version control

**UNIT V INDUSTRY TRENDS 9**

Market scenario and adoption of Agile, Agile ALM, Roles in an Agile project, Agile applicability, Agile in Distributed teams, Business benefits, Challenges in Agile, Risks and Mitigation, Agile projects on Cloud, Balancing Agility with Discipline, Agile rapid development technologies

**TOTAL: 45 Hours**

**TEXT BOOKS**

1. Ken Schwaber, Mike Beedle, “Agile Software Development with Scrum”, Pearson, 2014.

## REFERENCES

1. Robert C. Martin, "Agile Software Development, Principles, Patterns and Practices" Pearson, 2003.
2. Lisa Crispin, Janet Gregory," Agile Testing: A Practical Guide for Testers and Agile Teams" Addison Wesley, 2008.
3. Alistair Cockburn," Agile Software Development: The Cooperative Game" Addison Wesley, second Edition, 2006.

**Course Outcomes:**

At the end of the course, the students will be able to

- Demonstrate research writing skills both for research articles and thesis
- Frame suitable title and captions as sub-headings for articles and thesis
- Write each section in a research paper and thesis coherently
- Use language appropriately and proficiently for effective written communication
- Exhibit professional proof-reading skills to make the writing error free

<b>Unit – I</b>	<b>6</b>
Planning and preparation, word order, breaking up long sentences, organising ideas into paragraphs and sentences, being concise and avoiding redundancy, ambiguity and vagueness	
<b>Unit – II</b>	<b>6</b>
Interpreting research findings, understanding and avoiding plagiarism, paraphrasing sections of a paper/ abstract.	
<b>Unit- III</b>	<b>6</b>
Key skills to frame a title, to draft an abstract, to give an introduction	
<b>Unit – IV</b>	<b>6</b>
Skills required to organise review of literature, methods, results, discussion and conclusions	
<b>Unit – V</b>	<b>6</b>
Usage of appropriate phrases and key terms to make the writing effective - proof-reading to ensure error-free writing.

Regulations-2019

**COURSE OUTCOMES**

At the end of the course, the student will be able to

1. Apply the parallel algorithm principles in optimization problems
2. Write programs to implement parallel algorithms on shared memory using Open MP
3. Write programs to implement parallel algorithms on distributed memory using MPI
4. Implement parallel algorithm using Hybridized programming model with OpenMP and MPI
5. Write parallel program in CUDA architecture

**UNIT I INTRODUCTION TO PARALLEL ALGORITHM 9**

Principles of Parallel Algorithms- Graph Algorithms- Minimum Spanning Tree- Prim's Algorithm - Single-Source Shortest Paths-Dijkstra's Algorithm – All-Pairs Shortest Paths . Algorithms for Sparse Graphs - Search Algorithms for Discrete Optimization Problems - Sequential Search Algorithms - - Parallel Depth-First Search – Parallel Breadth-First Search - Dynamic Programming - Serial Monadic DP Formulations –No serial Monadic DP Formulations - Serial Polyadic DP Formulations.

**UNIT II PARALELL PROGRAMING WITH OPEN MP 9**

Shared-memory parallel programming with OpenMP- Introduction to OpenMP – Parallel execution - Data scoping -OpenMP work sharing for loops – Synchronization Reductions - Loop scheduling - Miscellaneous - Case study-OpenMP-parallel Jacobi algorithm - Advanced OpenMP-Wavefront parallelization - Efficient OpenMP programming - Profiling OpenMP programs.

**UNIT III PARALELL PROGRAMING WITH MPI 9**

Distributed-memory parallel programming with MPI- Message passing- MPI – example - Messages and point-to-point communication - Collective communication – Non blocking point-to-point communication - Virtual topologies - Example- MPI parallelization of Jacobi solver - Communication parameters -Synchronization serialization- contention - Implicit serialization and synchronization - Contention -Reducing communication overhead - Optimal domain decomposition – Aggregating messages - Non blocking vs. asynchronous communication.

**UNIT IV HYBRID PARALLIZATION MODEL 9**

Hybrid parallelization with MPI and OpenMP- Basic MPI/OpenMP programming models - Vector mode implementation - Task mode implementation - Case study- Hybrid Jacobi solver - MPI taxonomy of thread interoperability - Hybrid decomposition and mapping - Potential benefits and drawbacks of hybrid programming.

**UNIT V CUDA PROGRAMMING MODEL 9**

CUDA Architecture, Using the CUDA Architecture, Applications of CUDA Introduction to CUDA C-Write and launch CUDA C kernels, Manage GPU memory, Manage communication and synchronization, Parallel programming in CUDA- C

**THEORY: 45 Hours      TUTORIAL: -      PRACTICAL:-      TOTAL: 45 Hours**

**TEXT BOOK**

**COURSE OUTCOMES**

At the end of the course, the student will be able to

1. Explain importance of cyber security and its essentials through various examples of cybercrimes in the world.
2. Analyze possible cyber attacks, the security challenges of mobile devices and implement organizational security Policies and measures.
3. Describe tools, methods used by cyber criminals and apply various techniques to protect against the cyber attack.
4. Explain importance of cyber laws, cybercrime scenario in India and amendments made in the Indian ITA.
5. Apply a suitable tools and techniques for analyzing and validating forensics data

**UNIT-I INTRODUCTION TO CYBERCRIME 9**

Introduction - Cybercrime: Definition - Cybercrime and Information Security- Cybercriminals- Classifications of Cybercrimes - Cybercrime: The Legal Perspectives -Cybercrimes: An Indian Perspective - Cybercrime and the Indian ITA 2000 - A Global Perspective on Cybercrimes- Attacks - Social Engineering - Cyber stalking - Cybercafé and Cybercrimes- Botnets: The Fuel for Cybercrime - Attack Vector - Cloud Computing

**UNIT-II CYBERCRIME IN MOBILE DEVICES 9**

Proliferation of Mobile Devices - Trends in Mobility - Credit Card Frauds in Mobile and Wireless Computing Era- Security Challenges Posed by Mobile Devices -Registry Settings for Mobile Devices - Authentication Service Security - Attacks on Mobile/Cell Phones - Mobile Devices: Security Implications for Organizations - Organizational Measures for Handling Mobile - Organizational Security Policies and Measures in Mobile Computing Era.

**UNIT-III TOOLS AND METHODS USED IN CYBERCRIME 9**

Proxy Servers and Anonymizers - Phishing - Password Cracking -Keyloggers and Spywares - Virus and Worms - Trojan Horses and Backdoors - Steganography - DoS and DDoS Attacks - SQL Injection - Buffer Overflow.

**UNIT-IV CYBERCRIMES AND CYBERSECURITY: THE LEGAL PERSPECTIVES 9**

Cybercrime and the Legal Landscape around the World -Cyberlaws: The Indian Context -- The Indian IT Act - Challenges to Indian Law and Cybercrime Scenario in India - Consequences of Not Addressing the Weakness in Information Technology Act - Digital Signatures and the Indian IT Act - Amendments to the Indian IT Act - Cybercrime and Punishment - Cyberlaw, Technology and Students: Indian Scenario.

**UNIT-V UNDERSTANDING COMPUTER FORENSICS 9**

Historical Background of Cyberforensics - Digital Forensics Science - The Need for Computer Forensics - Cyberforensics and Digital Evidence - Forensics Analysis of E-Mail - Digital Forensics Life Cycle - Chain of Custody Concept - Network Forensics - Approaching a Computer Forensics Investigation -- Setting up a Computer Forensics Laboratory: Understanding the Requirements - Computer Forensics and Steganography -- Forensics and Social Networking Sites: The Security/Privacy Threats - Computer Forensics from Compliance Perspective - Challenges in Computer Forensics - Special Tools and Techniques - Forensics Auditing – Antiforensics,

**COURSE OUTCOMES**

At the end of the course, the student will be able to

1. Interface various sensors with Arduino and Raspberry pi boards.
2. Implement the control applications using Arduino programming
3. Experiment the different IoT applications with Raspberry pi using Python Programming.

**LIST OF EXPERIMENTS**

1. Installation of Arduino IDE and Blink LED
2. Creating different LED Patterns using Loops and functions
3. Interfacing Arduino Nano with Joystick
4. Control the brightness of an LED by using PWM
5. Control servo motor using Joystick
6. Control LED, Buzzer and Relay from smart phone using Bluetooth Module.
7. Interface DHT 11 sensor with Arduino Nano and upload the humidity and temperature on the cloud.
8. Familiarization of Raspberry pi by blink LED program
9. Interface PIR sensor with Raspberry pi for motion detection.
10. Control the stepper motor using Raspberry pi based on specific input
11. Measure the humidity and temperature using DHT sensor and display the data readings on the LCD screen.
12. Build a secret code based security system using Raspberry pi
13. Interface ultrasonic sensor with Raspberry pi for distance measurement

**THEORY: -                  TUTORIAL: -                  PRACTICAL: 60                  TOTAL: 60 Hours**

**COURSE OUTCOMES**

1. Write programs to implement parallel algorithms using Open MP and MPI
2. Implement parallel algorithm using Hybridized programming model with OpenMP and MPI
3. Write parallel program in CUDA architecture

**LIST OF EXPERIMENTS**

1. Implement the parallel breadth first and depth first search using OPEN MP
2. Implement the sequential search algorithm using OPEN MP
3. Implement the parallelization of Jacobi solver using MPI
4. Demonstrate how non-blocking and asynchronous communication can be achieved using MPI
5. Implement the Matrix factorization in hybrid programming model of OPEN MP and MPI.
6. Demonstrates how to use GPU assert in a CUDA C program.
7. Demonstrates Parallel Reduction using Min, Max, Sum and Average operations
8. Demonstrates Parallel Binary search for sorted array using CUDA
9. Demonstrates an advanced quicksort implemented using CUDA
10. Demonstrates an advanced bubble sort implemented using CUDA
11. Demonstrates an advanced Merge sort implemented using CUDA
12. Demonstrates the use of OpenMP and CUDA streams with Unified Memory on a single GPU.
13. Demonstrates compilation of matrix multiplication CUDA kernel at runtime using libNVRTC.
14. Demonstrates compilation of CUDA kernel performing vector addition at runtime using libNVRTC.

**THEORY: -****TUTORIAL: -****PRACTICAL: 60****TOTAL: 60 Hours**

**COURSE OUTCOMES**

At the end of the course, the student will be able to,

1. Implement efficient Data ware house system specific to the problem
2. Explain the data mining techniques and applications
3. Apply data preprocessing on raw data and identify interesting pattern using association rule mining
4. Construct the supervised and unsupervised classifier to differentiate the target label.
5. Apply different clustering technique on preprocessed data to derive useful patterns.

**UNIT I DATA WAREHOUSING 9**

Data warehouse - Basic Concepts, Data warehouse Modeling: Data Cube and OLAP, Data Warehouse Design and Usage, Data Warehouse Implementation, Data Generalization by Attribute Oriented Induction, Data Cube Computation Preliminary Concepts.

**UNIT II INTRODUCTION TO DATA MINING 9**

Why Data Mining?, What is Data Mining?, Kinds of Data to be Mined, Patterns of Data – Technologies, applications, Major Issues, Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Data Visualization, Measuring Data Similarity and Dissimilarity.

**UNIT III DATA PREPROCESSING AND MINING FREQUENT PATTERNS 9**

Overview, Data Cleaning, Data Integration, Data reduction, Data Transformation and Data Discretization, Mining Frequent Patterns, Associations and Correlations – Basic Concepts, Frequent Itemsets Mining, Pattern Evaluation Methods, Mining Multilevel Associations, Mining Rare and Negative Patterns, Applications of Pattern Mining.

**UNIT IV CLASSIFICATION 9**

Basic Concepts, Decision Tree Induction, Bayes Classification Methods, Rule Based Classification, Model Evaluation and Selection, Classification by Back Propagation, Support Vector Machines, Classification using Frequent Patterns, Lazy Learners.

**UNIT V CLUSTER ANALYSIS AND OUTLIER DETECTION 9**

Cluster Analysis, Partitioning Methods, Hierarchical Methods, Density Based Methods, Evaluation of Clustering, Probabilistic Model based Clustering, Clustering High Dimensional Data, Clustering Graph and Network Data, **Outlier Detection** - Outliers and Outlier Analysis, Outlier Detection Methods, Statistical Approaches, Clustering Based Approaches, Classification Based Approaches.

**THEORY: 45 Hours      TUTORIAL: -      PRACTICAL: -      TOTAL: 45 Hours**

**COURSE OUTCOMES**

At the end of the course, the student will be able to,

1. Identify the importance and usability levels for interactive systems.
2. Analyze the development process involved in user interface.
3. Develop skills in handling virtual environments and its exploitation.
4. Comprehend the diverse input methods available for interfacing.
5. Explain the recent technologies and its application of HCI.

**UNIT I IMPORTANCE OF USER INTERFACE 10**

Definition - importance of good design - Benefits of good design - History of Screen design. The graphical user interface – popularity of graphics, the concept of direct manipulation, graphical system, Characteristics, Web user – Interface popularity, characteristics- Principles of user interface Design process – Human interaction with computers, importance of human characteristics human consideration, Human interaction speeds, and understanding business junctions.

**UNIT II SCREEN DESIGNING 10**

Design goals – Screen planning and purpose, organizing screen elements, ordering of screen data and content – screen navigation and flow – Visually pleasing composition– amount of information – focus and emphasis – presentation information simply and meaningfully– information retrieval on web – statistical graphics – Technological consideration in interface design.

**UNIT III VIRTUAL ENVIRONMENT 9**

Windows – New and Navigation schemes selection of window, selection of devices based and screen based controls. Components – text and messages, Icons and increases – Multimedia, colors, uses problems, choosing colors- Virtual Augmented Reality techniques.

**UNIT IV INTERACTION DEVICES 8**

Interaction Devices –Keyboard and function keys – pointing devices – speech recognition digitization and generation –image and video displays – drivers.

**UNIT V TECHNOLOGIES FOR HCI 8**

HCI and related fields – Cognition Theory – A.I. – Accessibility Issues – Assistive Technologies- Technologies for HCI – Research Directions in HCI.

**THEORY: 45 Hours      TUTORIAL: -      PRACTICAL: -      TOTAL: 45 Hours**

**COURSE OUTCOMES**

At the end of the course, the student will be able to,

1. Explain the concept of IoT and identify the functions of different actuators and sensors.
2. Analyze various protocols for IoT.
3. Design an IoT system using Raspberry Pi/Arduino
4. Implement web based services on IoT devices
5. Analyze applications of IoT in real time scenario

**UNIT I FUNDAMENTALS OF IoT 9**

Evolution of Internet of Things – Enabling Technologies – IoT Architectures: oneM2M, IoT World Forum (IoTWF) and Alternative IoT models – Simplified IoT Architecture and Core IoT Functional Stack – Fog, Edge and Cloud in IoT – Functional blocks of an IoT ecosystem – Sensors, Actuators, Smart Objects and Connecting Smart Objects

**UNIT II IoT PROTOCOLS 9**

IoT Access Technologies: Physical and MAC layers, topology and Security of IEEE 802.15.4, 802.15.4g, 802.15.4e, 1901.2a, 802.11ah and LoRaWAN – Network Layer: IP versions, Constrained Nodes and Constrained Networks – Optimizing IP for IoT: From 6LoWPAN to 6Lo, Routing over Low Power and Lossy Networks – Application Transport Methods: Supervisory Control and Data Acquisition – Application Layer Protocols: CoAP and MQTT

**UNIT III DESIGN AND DEVELOPMENT 9**

Design Methodology – Embedded computing logic – Microcontroller, System on Chips – IoT system building blocks – Arduino – Board details, IDE programming – Raspberry Pi – Interfaces and Raspberry Pi with Python Programming.

**UNIT IV IoT PHYSICAL SERVERS AND CLOUD OFFERINGS 9**

Introduction to Cloud Storage models and communication APIs Webserver – Web server for IoT, Cloud for IoT, Python web application framework designing a RESTful web API

**UNIT V CASE STUDIES/INDUSTRIAL APPLICATIONS 9**

Cisco IoT system – IBM Watson IoT platform – Manufacturing – Converged Plantwide Ethernet Model (CPwE) – Power Utility Industry – GridBlocks Reference Model – Smart and Connected Cities: Layered architecture, Smart Lighting, Smart Parking Architecture and Smart Traffic Control

**Course Outcomes:**

At the end of completion of this course, students will be able to

1. Develop physical and mental health thus improving social health
2. Increase immunity power of the body and prevent diseases
3. Accelerate memory power
4. Achieve the set goal with confidence and determination
5. Improve stability of mind, pleasing personality and work with awakened wisdom

**UNIT – I****6**

Yoga-Introduction - Astanga Yoga- 8 parts-Yam and Niyam etc.- Do's and Don'ts in life-Benefits of Yoga and Asana- Yoga Exercise- and benefits- Pranayam Yoga- Nadisuthi, Practice and Spinal Clearance Practice-Regularization of breathing techniques and its effects-Practice and kapalapathy practice.

**UNIT – II****6**

Neuromuscular breathing exercise and Practice- Magarasa Yoga, 14 points Acupressure techniques and practice- Body relaxation practice and its benefits- Raja Yoga- 1.Agna –explanation and practice- Activation of Pituitary- Raja Yoga-2. Santhi Yoga-Practice-Balancing of physical and mental power.

**UNIT – III****6**

Raja Yoga-3.Sagasrathara yoga –practice- Activation of dormant brain cells-Kayakalpa-theory- Kayakalpa –practice-Yogic exercise to improve physical and mental health and practice-Asanas –explanation-Practice-benefits

**UNIT –IV****6**

Sun namaskar- 12 poses-explanation and practice-Yoga –Asana-Padmasana, vajrasana,chakrasana, viruchasanaetc-Stress management with Yoga-Role of women and Yoga Equality, nonviolence, Humanity,Self- control- Food and yoga Aware of self-destructive habits Avoid fault thinking (thought analysis-Practice)-Yoga Free from ANGER (Neutralization of anger)& practice

**UNIT – V****6**

Moralisation of Desire & practice- Punctuality-Love-Kindness-CompassionEradication ofworries-Practice - Personality development, positive thinking-Good characters to lead a moral life How to clear the polluted mind- Benefits of blessing- Five- fold culture –explanation- Karma Yoga Practice In Geetha- Sense of duty-Devotion, self- reliance, confidence, concentration, truthfulness, cleanliness.

**COURSE OUTCOMES**

At the end of the course, the student will be able to

1. Explain the need and challenges of cloud computing
2. Explain the technologies and services associated with cloud computing
3. Describe the types of abstraction and virtualization management in the cloud
4. Explain the concepts for managing and securing in the cloud
5. Explain the different framework and analyze the tools available for creating cloud environment.

**UNIT I INTRODUCTION TO CLOUD COMPUTING 9**

Introduction to Cloud Computing: Overview, Roots of Cloud Computing, Layers and Types of Cloud, Desired Features of a Cloud, Benefits and Disadvantages of Cloud Computing, Challenges and Risks, Assessing the role of Open Standards

**UNIT II CLOUD ARCHITECTURE, SERVICES AND APPLICATIONS 9**

Exploring the Cloud Computing Stack, Connecting to the Cloud, Infrastructure as a Service, Platform as a Service, Using PaaS Application Frameworks, Software as a Service, SaaS vs. PaaS, Identity as a Service, Compliance as a Service

**UNIT III ABSTRACTION AND VIRTUALIZATION 9**

Introduction to SAN, Introduction to Virtualization Technologies, Load Balancing and Virtualization, Understanding Hypervisors, Understanding Machine Imaging, Porting Applications, Virtual Machines Provisioning and Manageability Virtual Machine Migration Services, Virtual Machine Provisioning and Migration in Action

**UNIT IV MANAGING & SECURING THE CLOUD 9**

Administering the Clouds, Cloud Management Products, Emerging Cloud Management Standards, Securing the Cloud, Securing Data, Establishing Identity and Presence

**UNIT V CASE STUDIES 9**

Case study in Open Stack, Google Cloud, Amazon Web Services, Salesforce.

**PREAMBLE**

Python is an easy to learn, powerful programming language. It has efficient high-level data structures. It is a simple but effective approach to object-oriented programming. Python's elegant syntax and dynamic typing, together with its interpreted nature, make it an ideal language for scripting and rapid application development in many areas on most platforms. This programming language has become a preferred development technology in IT industries.

Python can be integrated with many other technologies also. It is rapidly becoming a de-facto language for data analytics and / or machine learning as many packages are added to perform more complex tasks. This course aims to teach everyone the basics of programming using Python.

**COURSE OUTCOMES**

At the end of the course, the student will be able to

1. Write simple applications
2. Develop programs using loops
3. Create applications using functions
4. Develop application using files
5. Create application using Python and MySQL

**UNIT I INTRODUCTION 9**

The way of programming-What is programming- debugging – formal and natural languages - Python: Features - Installing - Running – The Basics-variables-Operators and Expressions

**UNIT II CONTROL FLOW 9**

Control Flow: introduction- if – else – while statement – do while – for loop –break – continue

**UNIT III PYTHON FUNCTIONS 9**

Sequences: String - List – Tuple – Dictionary - Functions – Function Parameters, Local and Global Variables, Default Arguments, Keyword Arguments, Return Statements.

**UNIT IV PYTHON MODULES, PACKAGES AND FILES 9**

Introduction – Byte files – from import – making own modules – Files and Input/Output: File Objects and Built in functions – Command line Arguments – Packages.

**UNIT V PYTHON DATABASE CONNECTIVITY 9**

SQL Introduction – simple queries – create - insert – update – delete, MySQL Introduction – connecting python and MySQL database.

**Total: 45 hours****TEXT BOOK**

1. Swaroop C N, “ A Byte of Python “, ebsshelf Inc., 1<sup>st</sup> Edition, 2013.

**REFERENCES**

1. Wesley J. Chun, “Core Python Programming”, Pearson, 2<sup>nd</sup> Edition, 2006.
2. Allen B.Downey, “Think Python: How to Think Like a Computer Scientist”, O'Reilly Media, 2<sup>nd</sup> Edition, 2015.

**COURSE OUTCOMES**

At the end of the course, the student will be able to

1. Explain the concepts of different types of learning and apply linear regression
2. Summarize the concepts of logistic regression and implement the same with python
3. Explain and apply the concepts of Neural networks and support vector machines
4. Evaluate the hypothesis based on factors like bias and variance
5. Explain the concepts of clustering, dimensionality reduction and anomaly detection.

**UNIT I INTRODUCTION AND LINEAR REGRESSION 9**

What is machine learning? – Supervised Learning – unsupervised learning – Linear Regression – cost function – gradient descent algorithm – normal equation – implementation - Gradient descent for multiple variables – feature scaling – learning rate – polynomial regression – normal equation – implementation

**UNIT II LOGISTIC REGRESSION 9**

Hypothesis representation – decision boundary – nonlinear decision boundaries – cost function – gradient descent – advanced optimizations – multi class classification problems – python implementation – **Regularization** - Problem of overfitting – cost function optimization for regularization – regularized linear regression – regularization with normal equation - regularized logistic regression – python implementation

**UNIT III NEURAL NETWORKS AND SUPPORT VECTOR MACHINES 9**

Overview and summary – neurons and brain – model representation – artificial neural networks representation – example – multiclass classification – cost function – back propagation algorithm – gradient checking – random initialization – implementation – Support vector machines – optimization objective – cost function – large margin intuition – decision boundary – kernels – adapting to nonlinear classifiers – implementation

**UNIT IV ADVICE FOR APPLYING MACHINE LEARNING 9**

Debugging a learning algorithm – evaluating a hypothesis – model selection and training, validation test sets – bias Vs variance – regularization and bias/variance – learning curves machine learning system design

**UNIT V OTHER TOPICS 9**

Unsupervised learning – k-means algorithm – optimization objective – choosing number of clusters - Dimensionality reduction – principle component analysis - Anomaly detection – algorithm – developing and evaluating the algorithm – anomaly detection Vs supervised algorithm -Case study – recommender system – collaborative filtering - Large scale machine learning – online learning – map reduce and parallelism.

**Total: 45 hours**
