COURSE OUTCOMES:

At the end of the course, the students will be able to

1. Analyze the switching circuits.
2. Analyze and study about the controlled rectifiers.
3. Discuss the various modes of operation of DC-DC switch mode converters.
4. Analyze the various types of Choppers.
5. Explain the principles and operations of regulators and cycloconverters.

CO5	1		3	3	3		2	2	2	3			2

UNIT I   SINGLE PHASE AC-DC CONVERTER   9
Static Characteristics of power diode, SCR and GTO, half controlled and fully controlled converters with RL, R-L-E loads and freewheeling diodes – continuous and discontinuous modes of operation – inverter operation –Sequence control of converters – performance parameters: harmonics, ripple, distortion, power factor – effect of source impedance and overlap-reactive power and power balance in converter circuits-problems.

UNIT II   THREE PHASE AC-DC CONVERTER   9
Semi and fully controlled converter with R, R-L, R-L-E - loads and freewheeling diodes – inverter operation and its limit – performance parameters – effect of source impedance and overlap – 12 pulse converter-Problems-Single-Phase and Three-Phase AC to DC converters-Half controlled configurations-operating domains of three phase full converters and semi-converters-Reactive power considerations

UNIT III   DC-DC CONVERTERS   9
Principles of step-down and step-up converters – Analysis of buck, boost, buck-boost and Cuk converters – time ratio and current limit control – Full bridge converter – Resonant and quasi –Resonant converters-Problems

UNIT IV   INVERTERS   9
Single phase and three phase inverters-Voltage source and Current source inverters-Voltage control and harmonic minimization in inverters.

UNIT V   AC VOLTAGE CONTROLLERS   9
AC to AC power conversion using voltage regulators-Choppers and cyclo-converters-Consideration of harmonics, introduction to Matrix converters-Design aspects of converters, Few practical applications.

                                                              Lecture: 45, Tutorial: 0, Total: 45

P19PED102   MODELING AND ANALYSIS OF ELECTRICAL MACHINES   3 0 0 3

COURSE OUTCOMES:

At the end of the course, the students will be able to

1. Analyze the various electrical parameters in mathematical form.
2. Differentiate the types of reference frame theories and transformation relationships.
3. Compute the electrical machine equivalent circuit parameters and modeling of synchronous machines
4. Explain vector based control and flux linkages in induction machines
5. Describe various practical issues of different machines.

CO / PO, PSO Mapping

CO3	3	3	3	3	3	2	1	1	2	2	2	3	3
CO4	3	3	3	3	3	2	1	1	2	2	2	3	3
CO5	3	3	3	3	3	2	1	1	2	2	2	3	3

UNIT I   MODELING OF DC MACHINES   9

Principles of Electromagnetic Energy Conversion-Induced EMF-Field excitation: separate, shunt, series and compound excitation-Commutator action-Calculation of air gap mmf of a single turn full pitch distributed armature windings - Per phase full pitched and short pitched armature coils (AC machines) - Calculation of air gap mmf of a DC machine - Introduction to direct axis and quadrature axis theory in salient pole machines -Calculation of air gap inductances of a synchronous machine.

UNIT II   DYNAMIC MODELING OF INDUCTION MACHINES   9

Equivalent circuits- Steady state performance equations-Dynamic modeling of induction machines: Real time model of a two phase induction machines, Three phase to two phase transformation-Electromagnetic torque-generalized model in arbitrary reference frames-stator reference frames model-rotor reference frames model-synchronously rotating reference frame model.

UNIT III   DYNAMIC MODELING OF SYNCHRONOUS MACHINES   9

Application of reference frame theory to three phase synchronous machine-dynamic model analysis-Park‟s equation - Voltage and torque equations - Deviation of steady state phasor relationship from dynamic model - Generalized theory of rotating electrical machine and Kron‟s primitive machine.

UNIT IV   VECTOR CONTROLLED INDUCTION MACHINES   9

Principle of vector control-Direct vector control: flux and torque processor-DVC in stator reference frames with space vector modulation. Indirect vector control scheme: Derivation and implementation. Flux weakening operation: principle-flux weakening in stator flux linkage and rotor flux linkage.

UNIT V   SPECIAL MACHINES   9

Permanent magnet – Airgap line- Demagnetizing characteristics – Energy density -synchronous machines with PMs: Machine configuration-flux density distribution-types of PMSM-Vector control of PMSM - Variable Reluctance Machines: Basics-analysis-practical configuration-circuit wave forms for torque production- stepping motors.

Lecture: 45, Tutorial: 0, Total: 45

P19PED103   SWITCHED MODE AND RESONANT CONVERTERS   3 0 0 3

COURSE OUTCOMES:

At the end of the course, the students will be able to

1. Understand working of different types of converters.
2. Understand components, switch mode topologies & control methods
3. Understand the properties of batteries and its types
4. Perform design calculations of resonant converter topologies
5. Understand the various filter design.

CO / PO, PSO Mapping

CO4	3	3	2	3	3	1	-	-	3	2	1	3	3
CO5	3	3	2	3	3	1	-	-	3	2	1	3	3

UNIT I   DC TO DC CONVERTER TOPOLOGIES   9
Buck, Boost, Buck-Boost-SMPS Topologies- Basic Operation-Waveforms - modes of operation -switching stresses-Switching and conduction losses-Optimum switching frequency-Practical -voltage, current and power limits - design relations-Voltage mode control principles- Push-Pull and Forward Converter Topologies - Basic Operation, Waveforms-Flux Imbalance Problem and Solutions

UNIT II   DESIGN OF SWITCHES   9
Transformer Design-Output Filter Design-Switching Stresses and Losses-Forward Converter Magnetics-Voltage Mode Control- Half and Full Bridge Converters-Basic Operation and Waveforms-Magnetics, Output Filter, Flux Imbalance, Switching Stresses and Losses, Power Limits, Voltage Mode Control.

UNIT III   RESONANT CONVERTERS   9
Classification of Resonant Converters-Basic Resonant Circuit Concepts-Load Resonant Converter, Resonant Switch Converter, Zero-Voltage Switching Clamped Voltage Topologies-Resonant DC Link Inverters with Zero Voltage Switching-High Frequency Link Integral Half Cycle Converter-Fly back Converter-discontinuous mode operation, waveforms, control-Magnetics- Switching Stresses and Losses, Disadvantages – Continuous Mode Operation, waveforms, control, design relations

UNIT IV   SWITCHED MODE POWER SUPPLIES   9
Voltage Mode Control of SMPS- Loop Gain and Stability Considerations-Error Amp– frequency Response and Transfer Function-Trans-conductance Current Mode Control of SMPS-Current Mode Control-Advantages- Comparison of Current Mode and Voltage Mode-Current Mode Deficiencies-Slope Compensation-Study of a typical Current Mode PWM Control IC UC3842-Modeling of SMPS-Small Signal Approximation- General Second Order Linear Equivalent Circuits.

UNIT V   FILTER DESIGN   9

DC Transformer, Voltage Mode SMPS Transfer Function- General Control Law Consideration- EMI Generation and Filtering in SMPS - Conducted and Radiated- Emission Mechanisms in SMPS-Techniques to reduce Emissions, Control of Switching Loci-Shielding and Grounding, Power Circuit Layout for minimum EMI-EMI Filtering at Input and Output, Effect of EMI Filter on SMPS Control Dynamics. Introduction to Resonant Converters.

4. M.H.Rashid, "Power Electronics", Prentice Hall of India, 4th edition, 2014.

COURSE OUTCOMES:

At the end of the course, the students will be able to

1. Model power electronic converter system and ability to implement in simulation tool.
2. Design and implement inverter for power electronic control applications.
3. Design and operate a power converter in buck and boost mode.

CO3	3	3	3	3	3	2			3	2	3	3	3

LIST OF EXPERIMENTS

1. Modeling of MOSFET/IGBT
2. Simulation of single phase Semi converter

    (i) R Load   (ii) RL Load   (iii) RLE (motor) Load

3. Simulation of single phase fully controlled converter

    (i) R Load   (ii) RL Load   (iii) RLE (motor) Load

4. Simulation of single phase dual converter
5. Simulation of three phase semi converter.
6. Simulation of three phase fully controlled converter
7. Simulation of Single phase full bridge Inverter
8. Simulation of three phase full bridge inverter.

    i.   180 degree mode operation

    ii. 120 degree mode operation

9. Simulation of three phases AC Voltage Controller.

    i.   Lamp load

    ii. Motor load

10. Simulation of PWM inverter fed three phase induction motor control.
11. Simulation of Buck and Boost Converter with Open Loop Operation.
12. Simulation of Z-Source Inverter.

(Software experiments are performed using MATLAB)

Total : 60 Hours

COURSE OUTCOMES:
At the end of this course the students will be able to,
1. Describe the basic power quality issues.
2. Discuss about voltage related problems.
3. Evaluate harmonics in power system due to power electronic devices.
4. Evaluate power quality using measuring equipment.
5. Improve the power quality using different types of filters.

	CO / PO, PSO Mapping (3/2/1 indicates strength of correlation) 3-Strong, 2-Medium, 1-Weak												
COs	Programme Outcomes (POs) and Programme Specific Outcome (PSOs)												
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	P09	PO10	PO11	PSO1	PSO2
CO1	2	1		1	1			1				3	3
CO2	2	1		1	1			1				3	3
CO3	3	2	1	2	3	2	2	1				3	3
CO4	2	2	2	2	3	2	2	1				3	3
CO5	2	3	3	2	3	2	2	1				3	3

UNIT I   INTRODUCTION   9

Power quality, Voltage quality – power quality evaluation procedure – overview of power quality phenomena – classification of power quality problems – power quality measures and standards – THD-TIF-DIN-C-message weights – flicker factor – occurrence of power quality problems – power acceptability curves – overview of EMC and IEEE standards.

UNIT II   VOLTAGE SAGS AND INTERRUPTIONS   9

Long Interruptions: Causes – generation, transmission and distribution reliability – basic concepts of reliability evaluation techniques – costs.
Short Interruptions: Origin – influence on motors and electronic equipment – single phase tripping.
Sags: Introduction – sag magnitude, duration – load influence on voltage sags – sags in adjustable speed AC and DC drives.

UNIT III   HARMONIC DISTORTION   9

Harmonic distortion – harmonics versus transients – harmonic indices – harmonic sources from commercial and industrial loads – locating harmonic sources – SMPS – Three phase power converters – arcing devices – Harmonic Distortion of fluorescent lamps – effects of harmonic distortion – inter-harmonics – principles for controlling harmonics –devices for controlling harmonic distortion.

UNIT IV   POWER QUALITY MONITORING   9

Monitoring considerations –power quality measurement equipment – power quality data assessment – basic design of an expert system for monitoring applications – power quality monitoring in internet.

UNIT V   POWER QUALITY IMPROVEMENT   9

Static compensator – Distribution static compensator – Dynamic voltage restorer – Power factor corrector – Active filters – Shunt active filters – applications – PSCAD / EMTDC – simulation of Active filters.

Lecture: 45, Tutorial: 0, Total: 45 Hours

ELECTRICAL AND ELECTRONICS ENGINEERING

M. E. – POWER ELECTRONICS AND DRIVES

SEMESTER – I	MATHEMATICAL METHODS FOR POWER ENGINEERING	L	T	P	C
P19PED502		2	1	0	3

COURSE OUTCOMES

At the end of the course, the students will be able to

1. find the rank of the matrix and solve linear system of equations by direct and indirect methods.
2. apply the concepts of Eigen values and Eigen vectors of a real matrix and their properties in diagonalization.
3. find the power spectral density for the wide sense stationary process.
4. apply the suitable methods to solve linear programming problem.
5. apply the appropriate methods to solve nonlinear programming problem.

	CO / PO, PSO Mapping (3/2/1 indicates strength of correlation) 3-Strong, 2-Medium, 1-Weak												
COs	Programme Outcomes (POs) and Programme Specific Outcome (PSOs)												
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	P09	PO10	PO11	PSO1	PSO2
CO1	3	3	3	3	2	2			2			3	3

CO4	3	3	3	3	2	2			2			3	3
CO5	3	3	3	3	2	2			2			3	3

UNIT – I   LINEAR SYSTEM OF EQUATIONS   9

Rank of a matrix – Solution of linear system of equations by matrix method, Gauss elimination, Gauss – Jordan, Gauss – Jacobi and Gauss – Seidel methods.

UNIT – II   EIGEN VALUES AND EIGEN VECTORS   9

Eigen values and eigen vectors – Properties of eigen values and eigen vectors – Cayley-Hamilton theorem – Diagonalization of symmetric matrices .

UNIT – III   RANDOM PROCESSES   9

Classification of random processes – First order, second order, strictly stationary, wide-sense stationary processes – Auto correlation function and its properties – Power spectral density function and its properties.

10.05.2019   **M.E / M.Tech Regulations 2019**

UNIT – IV   LINEAR PROGRAMMING   9
Simplex algorithm – Big–M method – Transportation problem – Assignment problem.

UNIT – V   NONLINEAR PROGRAMMING   9
Formulation of nonlinear programming problem – Constrained optimization with equality constraints – Constrained optimization with inequality constraints – Kuhn-Tucker conditions with non-negative constraints.

COURSE OUTCOMES

At the end of the course, the student will be able to

1. Review the literature of the research problem
2. Choose appropriate data collection and sampling method according to the research problem.
3. Interpret the results of research and communicate effectively with their peers
4. Explain the Importance of intellectual property rights
5. Evaluate trade mark, develop and register patents

UNIT I   INTRODUCTION TO RESEARCH METHODS   6

Definition and Objective of Research, Various steps in Scientific Research, Types of Research, Criteria for Good Research, Defining Research Problem, Research Design , Case Study Collection of Primary and Secondary Data, Collection Methods: Observation, Interview, Questionnaires, Schedules,

UNIT II   SAMPLING DESIGN AND HYPOTHESIS TESTING   6

steps in Sampling Design, Types of Sample Designs, Measurements and Scaling Techniques - Testing of hypotheses concerning means (one mean and difference between two means - one tailed and two tailed tests), concerning variance – one tailed Chi-square test.

UNIT III   INTERPRETATION AND REPORT WRITING   6

Techniques of Interpretation, Precaution in Interpretation, Layout of Research Report, Types of Reports, Oral Presentation, Mechanics of Writing Research Report

UNIT IV   INTRODUCTION TO INTELLECTUAL PROPERTY   6

Introduction, types of intellectual property, international organizations, agencies and treaties, importance of intellectual property rights, Innovations and Inventions trade related intellectual property rights.

PROFESSOR & HEAD
Department of Information Technology
SONA COLLEGE OF TECHNOLOGY
SALEM-636 005

P19GE701   **English for Research Paper Writing**

2000

Course Outcomes:

At the end of the course, the students will be able to
- Demonstrate research writing skills both for research articles and thesis
- Frame suitable title and captions as sub-headings for articles and thesis
- Write each section in a research paper and thesis coherently
- Use language appropriately and proficiently for effective written communication
- Exhibit professional proof-reading skills to make the writing error free

Unit – I   6
Planning and preparation, word order, breaking up long sentences, organising ideas into paragraphs and sentences, being concise and avoiding redundancy, ambiguity and vagueness

Unit – II   6

Interpreting research findings, understanding and avoiding plagiarism, paraphrasing sections of a paper/ abstract.

Unit- III   6

Key skills to frame a title, to draft an abstract, to give an introduction

Unit – IV   6

Skills required to organise review of literature, methods, results, discussion and conclusions

**Unit – V**   6

Usage of appropriate phrases and key terms to make the writing effective - proof-reading to ensure error-free writing.

COURSE OUTCOMES:
At the end of the study of this course the students will be able to,
1. Ability to acquire and apply knowledge of mathematics and converter/machine dynamics in Electrical engineering.
2. Ability to understand the steady state operation and transient dynamics of a motor load system.
3. Ability to formulate, design, simulate power supplies for generic load and for machine loads.
4. Analyze and design the current and speed controllers for a closed loop solid state DC motor drive.
5. Design digital control DC drive circuits for various motor control applications.

CO5	3	3	3	1	2	3	2	-	-	-	2	3	3

UNIT I   DC MOTORS FUNDAMENTALS AND MECHANICAL SYSTEMS   12
DC motor- Types, induced emf, speed-torque relations; Speed control – Armature and field speed control; Ward Leonard control – Constant torque and constant horse power operation - Introduction to high speed drives and modern drives. Characteristics of mechanical system – dynamic equations, components of torque, types of load; Requirements of drives characteristics – multi-quadrant operation; Drive elements, types of motor duty and selection of motor rating.

UNIT II   CONVERTER CONTROL   12
Principle of phase control – Fundamental relations; Analysis of series and separately excited DC motor with single-phase and three-phase converters – waveforms, performance parameters, performance characteristics. Continuous and discontinuous armature current operations; Operation with free wheeling diode; Implementation of braking schemes; Drive employing dual converter.

UNIT III   CHOPPER CONTROL   12
Introduction to time ratio control and frequency modulation; Class A, B chopper controlled DC motor – performance analysis, multi-quadrant control - Chopper based implementation of braking schemes; Multi-phase chopper;

UNIT IV   CLOSED LOOP CONTROL   12
Modeling of drive elements – Equivalent circuit, transfer function of self, separately excited DC motors; Linear Transfer function model of power converters; Sensing and feeds back elements - Closed loop speed control – current and speed loops, P, PI and PID controllers – response comparison.

Phase Locked Loop and micro-computer control of DC drives; Applications - Rolling mills, Traction, Solar powered pump drives, Battery powered vehicles (Block diagram of subsystems).

UNIT 1   FUNDAMENTALS OF AC MOTORS   12

Steady state performance equations- Rotating Magnetic Field- Torque production, Equivalent circuit- Performance of the machine with Variable Voltage-Variable frequency operation, constant Volt/Hz operation, Slip power recovery – Static Kramer Drive - Synchronous Drives.

UNIT II   VSI AND CSI FED INDUCTION MOTOR CONTROL   12

AC voltage control circuit- six step inverter voltage control- closed loop variable frequency PWM inverter with dynamic braking- CSI fed IM variable frequency drives- comparison.

UNIT III   FIELD ORIENTED CONTROL   12

Field oriented control of induction machines- Theory-DC analogy- Direct or feedback vector control- Indirect or feed forward vector control- Flux vector estimation- Space vector modulation control.

UNIT IV   DIRECT TORQUE CONTROL   12

Direct torque control of induction machines- Torque expression with stator and rotor fluxes, DTC control strategy- Optimum switching vector selection- reduction or torque ripple methods.

UNIT V   SYNCHRONOUS MOTOR DRIVES   12

Wound field cylindrical rotor motor- Equivalent circuit –Performance equations of operation from a voltage source- Power factor control and V curves- Starting and braking, self control – Load commutated Synchronous motor drives – Brush and Brushless excitation.

P19PED203   SPECIAL ELECTRICAL MACHINES AND THEIR CONTROLLERS   3 0 0 3

COURSE OUTCOMES:
At the end of the study of this course the students will be able to,
1. Explain the importance of advanced electrical motors.
2. Discuss the working principle and performance of advanced electrical motors such as stepper motors, Brushless dc motors and Switched Reluctance motors.
3. Design control techniques of electrical motors.
4. Discuss operation and characteristics of permanent magnet synchronous motors.
5. Design the controllers for Special machines.

UNIT I   STEPPING MOTORS   9

Principle of operation – Classification – Construction and operation: VR motor, permanent magnet stepping motor, hybrid stepping motor. Monofilar and bifilar windings, Static characteristics – Dynamic characteristics – Modes of excitation- Micro stepping – Applications.

UNIT II   SWITCHED RELUCTANCE MOTOR   9

Construction – Principle of operation – SRM Vs stepper motor, poles, phase and windings – Static torque production – Energy conversion loop – Partition of energy and effect of saturation – Converter circuits, Controls: current regulation, commutation, Torque-speed characteristics.

UNIT III   BRUSHLESS DC MOTORS   9

Fundamentals of permanent magnets – demagnetization curve – comparison of conventional and brushless dc machine – Position detection using hall element – Basic three phase bipolar driven motor – Multi phase brushless motor – Square wave permanent magnet brushless motor – Torque and emf equations – Torque speed characteristics – Control methods.

UNIT IV   PERMANENT MAGNET SYNCHRONOUS MOTORS   9

Principle of operation, EMF, power input and torque expressions, Phasor diagram, Power controllers, Torque speed characteristics, Self-control, Vector control, Current control schemes.

UNIT V CONTROLLER FOR SPECIAL MACHINES   9

Stepper motor: drive systems and circuit for open loop control – closed loop operation system using microprocessor, SRM: microcontroller based control, BLDC: six step commutations for PM Brushless dc motor and sinusoidal commutation drive.

COURSE OUTCOMES:
At the end of the course, the students will be able to,
1. Comprehensive understanding on the switching behaviour of Power Electronic Switches.
2. Explain the requisite knowledge necessary to appreciate the dynamical equations involved in the analysis of different Power electronics circuits.
3. Analyze, design and simulate different power Electronic Drives of AC and DC Machines.

LIST OF EXPERIMENTS

1. Speed control converter fed DC drive.
2. Speed control of chopper fed DC Drive.
3. V/f control of induction motor drive using DSP.
4. FPGA controlled induction motor drive.
5. Micro controller based speed control of stepper motor.
6. DSPIC based speed control of BLDC motor.
7. DSP based speed control of SRM motor.
8. Power quality analysis of single phase & three phase non-linear system.
9. Modeling and simulation of converter fed closed loop control of a DC motor.
10. Modeling and simulation of dual converter fed DC motor drive.
11. Modeling and simulation of chopper fed closed loop control of a AC motor.
12. Modeling and simulation of four quadrant operation of three-phase induction motor.
13. Modeling and simulation of VSI and CSI fed induction motor drive.
14. Modeling and simulation of vector controlled induction motor drive.
15. Modeling and simulation of self controlled synchronous motor drive.

Total Hours: 60

COURSE OUTCOMES:
At the end of this course the students will be able to:
1. Distinguish between smart grid and conventional grid.
2. Apply smart metering concepts to industrial and commercial installations.
3. Apply modern communication technologies for smart grid solutions.
4. Explain about the microgrid renewable energy systems.
5. Formulate solutions for the power quality issues in smart grid.

UNIT I   FUZZY LOGIC   9
Introduction to Artificial Intelligence, Classic set-Fuzzy set theory–Basic Definition and Terminology-Set Theoretic operations and properties- Membership function-Linguistic variable-Formation of fuzzy IF-THEN rules -Fuzzy inference- Design of fuzzy logic controller-Defuzzification methods.

UNIT II   ARTIFICIAL NEURAL NETWORKS   9
Introduction Models of Neuron Network – Architectures – Knowledge representation – Artificial Intelligence and Neural networks–Learning process – Error correction learning – Hebbian learning – Competitive learning – Boltzman learning –Supervised learning – Unsupervised learning – Reinforcement learning – learning tasks- Multi – layer perceptron using Back propagation Algorithm (BPA) – Self – Organizing Map (SOM)–- Radial Basis Function Network – Functional Link Network (FLN) – Hopfield Network.

UNIT III   NEURO-FUZZY   9
Neuro Fuzzy Modeling - Adaptive Neuro fuzzy Inference Systems- Neuro fuzzy controllers.

UNIT IV   GENETIC ALGORITHMS   9
Genetic Algorithms: Introduction–Encoding – Fitness Function–Reproduction operators–Genetic Modeling – Genetic operators–Cross over – Single site cross over – Two point cross over – Multi point cross over – Uniform cross over – Matrix cross over–Cross over Rate –Inversion & Deletion – Mutation operator – Mutation – Mutation Rate–Bit–wise operators –Generational cycle – convergence of Genetic Algorithm-Hybrid Approach-Neuro-Genetic Hybrid and Fuzzy-Genetic Hybrid

UNIT V   **APPLICATIONS**   **9**

GA application to power electronic controllers optimization problem -case studies: Identification and control of linear and nonlinear dynamic systems using Matlab - Neural Network toolbox. Stability analysis of Neural Network interconnection systems- Implementation of fuzzy logic controller using Matlab fuzzy logic toolbox-Stability analysis of fuzzy control systems.

Lecture: 45, Tutorial: 00, Total: 45 Hours

4. Fausett Laurence, "Fundamentals of Neural Networks", Pearson Education, New Delhi, 2004.

Course Outcomes:

At the end of completion of this course, students will be able to
1. Develop physical and mental health thus improving social health
2. Increase immunity power of the body and prevent diseases
3. Accelerate memory power
4. Achieve the set goal with confidence and determination
5. Improve stability of mind, pleasing personality and work with awakened wisdom

UNIT – I   **6**

Yoga-Introduction - Astanga Yoga- 8 parts-Yam and Niyam etc.- Do`s and Don'ts in life-Benefits of Yoga and Asana- Yoga Exercise- and benefits- Pranayam Yoga- Nadi suthi, Practice and Spinal Sclearance Practice- Regularization of breathing techniques and its effects-Practice and kapalapathy practice.

UNIT – II   **6**

Neuromuscular breathing exercise and Practice- Magarasa Yoga, 14 points Acupressure techniques and practice- Body relaxation practice and its benefits- Raja Yoga- 1.Agna – explanation and practice- Activation of Pituitary- Raja Yoga- 2. Santhi Yoga-Practice-Balancing of physical and mental power.

UNIT – III   **6**

Raja Yoga- 3. Sagasrathara yoga –practice- Activation of dormant brain cells-Kayakalpa-theory- Kayakalpa –practice-Yogic exercise to improve physical and mental health and practice-Asanas –explanation-Practice-benefits

UNIT –IV   **6**

Sun namaskar- 12 poses-explanation and practice-Yoga –Asana-Padmasana, vajrasana,chakrasana, viruchasana etc-Stress management with Yoga-Role of women and Yoga

Equality, nonviolence, Humanity, Self- control- Food and yoga Aware of self-destructive habits

Avoid fault thinking (thought analysis-Practice)-Yoga Free from ANGER (Neutralization of anger)& practice

UNIT – V   **6**
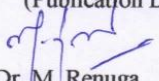

Moralisation of Desire & practice- Punctuality-Love-Kindness-Compassion Eradication of worries-Practice -Personality development, positive thinking-Good characters to lead a moral life

How to clear the polluted mind- Benefits of blessing- Five- fold culture –explanation- Karma Yoga Practice In Geetha- Sense of duty-Devotion, self- reliance, confidence, concentration, truthfulness, cleanliness.

COURSE OUTCOMES

At the end of this course, the students will be able to,
1. Discuss the need of FACTS technology.
2. Explain the static shunt compensation techniques.
3. Describe the operation and control of series compensators and regulators.
4. Explain the operation of combined compensators and SSR scheme.
5. Discuss the behaviour of custom power devices.

COs	Programme Outcomes (POs) and Programme Specific Outcome (PSOs)

Table title: CO / PO, PSO Mapping (3/2/1 indicates strength of correlation) 3-Strong, 2-Medium, 1-Weak

UNIT I   FACTS CONCEPTS AND SYSTEM CONSIDERATIONS   9

Basics of power transmission networks – Power flow control, loading capability and dynamic stability considerations – Overview to conventional control mechanisms – Types of FACTS controllers – Shunt and Series compensation principles, benefits and comparison – Overview of passive reactive power compensation – concept of voltage and current source convertors.

UNIT II   STATIC SHUNT COMPENSATORS   9

Objectives of shunt compensation – Static Var generators: TSC and TSR, operating characteristics – Static Var compensators: SVC and STATCOM – Comparison between SVC and STATCOM – static var systems.

UNIT III   STATIC SERIES COMPENSATORS AND REGULATORS   9

Objectives of series compensation – Static series compensators: TSSC, TCSC and SSSC, operation and control – Static voltage and phase angle regulators: TCVR and TCPAR, Operation, Control and applications

UNIT IV   COMBINED COMPENSATORS AND SPECIAL FACTS DEVICES   9

Unified Power Flow Controller – Operating principle, real and reactive power flow control – comparison with series compensators and regulators – Interline Power Flow Controller – Operating principle – SSR damping scheme – Thyristor controlled Braking Resistor – Fault Current Limiter.

UNIT V   CUSTOM POWER DEVICES   9

Utility customer interface – Reactive power compensation – Network Reconfiguring Devices: SSCL, SSB and SSTS – Load compensating devices: DSTATCOM, DVR and UPQC – Load Compensation and Voltage Regulation using DSTATCOM – Protecting Sensitive Loads using DVR – Unified Power Quality Conditioner.

S. Padma 15.7.23

Dr.S.PADMA, M.E., Ph.D.,
Professor and Head,
Department of EEE,
Sona College of Technology
Salem-636 005. Tamil Nadu.

Course Code : P19ISE601

Course Name : TRANSPORT SAFETY

Lecture	-	3 Hrs/Week	Internal Marks	50
Tutorial	-	0 Hrs/Week	External Marks	50
Practical	-		Credits	3

Pre-requisites subject: Nil

Upon completion of this course the students will be able to

Course Outcomes

C01 explain the dangers of transporting hazardous goods and the safe procedures to be followed during transit.

C02 Determine the main factors contribute to the safety in road transport and implement appropriate measures to prevent accidents.

C03 know the methods of selecting and training drivers and teach them the safe procedures to be followed.

C04 Analyze the construction features of road and rails which contribute the accidents and design appropriate traffic management.

C05 implement the methods of keeping repair shop and off road vehicle safe and the wafer ways of servicing the vehicles.

CO / PO, PSO Mapping (3/2/1 indicates strength of correlation) 3-Strong, 2-Medium, 1-Weak														
Programme Outcomes (POs) and Programme Specific Outcome (PSOs)														
COs, POs PSOs Mapping	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO – 1	3	-	-	-	1	3	3	3	2	2	3	3	2	2
CO – 2	3	2	2	1	3	3	3	3	2	2	-	2	2	3
CO – 3	2	3	2	3	3	3	3	3	3	3	3	2	2	3
CO – 4	2	1	3	3	3	3	2	3	1	2	-	2	3	3
CO - 5	1	3	3	3	-	3	-	3	3	3	2	3	2	2

UNIT I TRANSPORTATION OF HAZARDOUS GOODS L 9 T 0

Transport emergency card (TREM) – driver training-parking of tankers on the highways-speed of the vehicle – warning symbols – design of the tanker lorries -static electricity-responsibilities of driver – inspection and maintenance of vehicles-check list- loading and decanting procedures – communication.

UNIT II ROAD TRANSPORT L 9 T 0

Introduction – factors for improving safety on roads – causes of accidents due to drivers and pedestrians-design, selection, operation and maintenance of motor trucks-preventive maintenance check lists-motor vehicles act – motor vehicle insurance and surveys – modern sensor devices.

UNIT III DRIVER AND SAFETY L 9 T 0

Driver safety programme – selection of drivers – driver training-tacho-graph-driving test-driver's responsibility-accident reporting and investigation procedures-fleet accident frequency-safe driving incentives-slogans in driver cabin-motor vehicle transport workers act- driver relaxation and rest pauses – speed and fuel conservation – emergency planning and Haz mat codes

UNIT IV ROAD SAFETY L 9 T 0

Road alignment and gradient-reconnaissance-ruling gradient-maximum rise per k.m.- factors influencing alignment like tractive resistance, tractive force, direct alignment, vertical curves-breaking characteristics of vehicle-skidding-restriction of speeds-significance of speeds-Pavement conditions – Sight distance – Safety at intersections – Traffic control lines and guide posts-guard rails and barriers – street lighting and illumination overloading-concentration of driver. Plant railway- Clearance-track-warning methods-loading and unloading-moving cars-safety practices.

UNIT V SHOP FLOOR AND REPAIR SHOP SAFETY L 9 T 0

Transport precautions-safety on manual, mechanical handling equipment operations-safe driving movement of cranes-conveyors etc., servicing and maintenance equipment-grease rack operation wash rack operation-battery charging-gasoline handling-other safe practices-off the road motorized equipment.

TOTAL NUMBER OF PERIODS= 45

Content beyond syllabus

- Aviation safety
- Maritime safety
- Railway safety
- Traffic management
- Safety management systems

Learning Resources
